

FLEXSEAL® RWI

Advantages

- ▶ Made with the CONTROLLED DENSITY® process which ensures that the optimum filler density is constant across the windings for consistent compression and superior sealability
- ▶ Durable; easy installation and removal
- ▶ Seals pressures to flange ratings, in accordance with ASME B16.5
- ▶ Suited to temperatures from cryogenic to 2000°F (1093°C), depending on metal and filler.
- ▶ Guide ring simplifies centering of sealing element on the flange face
- ▶ Custom-tailored solutions accommodate a variety of conditions by combining various metals and filler materials

Style RWI

- ▶ Suitable for raised face flanges up to class 2500# flanges
- ▶ Inners rings are recommended by ASME B16.20 unless otherwise specified
- ▶ Inner ring acts as compression limiter and protects sealing elements from process media attack

Ordering Information

When ordering specify:

- ▶ Nominal pipe size and pressure rating
- ▶ Winding and filler materials
- ▶ Centering and inner ring material
